Experience

Product Designer (Secondment) Atlassian

Nov 2023 - Apr 2024 (6 months)

Designed a Jira experience that uses AI to break down large pieces of work, called Epics, into smaller, actionable work items that teams can review and refine. I also conducted user interviews, curated high quality data for training models and built interactive prototypes in code.

This pilot project reduced planning time by 68% for development teams and was featured in Atlassian’s Team ’24 keynote ↗.

Software Engineer Atlassian

Jul 2020 - Feb 2025 (4 years 8 months)

Worked as a backend engineer across the Marketplace and Jira platform teams.

Helped rearchitect the Marketplace platform from a monolith into microservices to support server-to-cloud migrations. Built data migration verification and reconciliation frameworks and image-upload APIs, increasing the combined API reliability SLO from 96.2% to 98.7%.

Improved Jira issue-creation performance for 3 million users by reducing peak load time from 5.5s to 1.26s and saving over \$200k in annual operating costs. I optimised custom-field loading, caching, and database queries.

Education

B.E. Information Science

2016 - 2020 (R.V. College of Engineering, Bengaluru)
